TECHNE

CORE PRINCIPLES

01

Augmentation over Automation

Technology extends human capability, not replaces it

02

Collective Intelligence

Intelligence emerges from relationship, not computation alone

03

The Craft of Composition

Mastery is recognizing which patterns a problem requires and composing them with fluency

04

Bootstrapping

Using your tools to improve your tools — the compounding engine

05

Commons Ownership

Infrastructure owned by the people who use it

06

Grounded in Place

All coordination happens somewhere — in a watershed, a season, a building

07

Articulation as Capability

The ability to express what you want clearly is the foundational skill
